LinkedIn Profile • GitHub Portfolio

PROFESSIONAL SUMMARY

Computer Science & Engineering undergraduate specializing in Machine Learning, Deep Learning, and Python application ecosystems. Experienced in developing computer vision systems using Convolutional Neural Networks (CNNs) and implementing robust database architectures. Adept at building clean user interfaces, structuring end-to-end data pipelines, and implementing intelligent automation frameworks to tackle real-world engineering challenges.

TECHNICAL SKILLS

- **Programming Languages & Databases:** Python, SQL, PostgreSQL
- **Machine Learning & Deep Learning:** TensorFlow, Scikit-Learn, Convolutional Neural Networks (CNN), RNN, OpenCV, Computer Vision, Natural Language Processing (NLP) foundations
- **Libraries & Frameworks:** Pandas, NumPy, Streamlit, CustomTkinter, Matplotlib, Seaborn
- **Developer Tools:** Git, GitHub, Jupyter Notebook, Google Colab

TRAININGS & CERTIFICATIONS

Data Science and Machine Learning

Binary Brains, Nagpur

Dec 2025 – Apr 2026

Python and Data Analytics

Binary Brains, Nagpur

Aug 2025 – Nov 2025

PROJECTS

Real-Time Hand Gesture Recognition System

[\[Project Link\]](#)

Technologies: Python, TensorFlow, OpenCV, CNN | AI/ML Project

- Developed a real-time computer vision system utilizing Convolutional Neural Networks (CNN) to detect and classify multiple distinct hand gestures.
- Engineered an end-to-end image preprocessing and scaling pipeline integrating active webcam video streams with live frame-by-frame model inference via OpenCV.
- Applied feature extraction and spatial data augmentation tactics to maximize network stability and prediction reliability across varied lighting environments.

AI-Powered Task Manager

[\[Project Link\]](#)

Technologies: Python, Streamlit, SQLite/PostgreSQL, NLP, Automation | AI-Driven Automation

- Built a smart web application using Streamlit that integrates intelligent core task scheduling and prioritization mechanisms.
- Implemented targeted string matching and Natural Language Processing (NLP) rule-sets to dynamically parse deadline metrics, categories, and target severities out of unformatted data inputs.
- Created a clean analytics dashboard layer leveraging dynamic charting elements for real-time task completion statistics and personal metric analytics.

AI-Based Used Car Price Prediction System

[\[Project Link\]](#)

Technologies: Python, Scikit-Learn, Pandas, NumPy, Streamlit | Machine Learning

- Engineered an interactive web-based prediction application deployed through a fast Streamlit interface to estimate resale market value for pre-owned cars.
- Executed rigorous Exploratory Data Analysis (EDA) pipelines using Pandas and NumPy, covering categorical variable encoding, data imputation, and outlier treatment.
- Trained, tested, and fine-tuned a Linear Regression model leveraging Scikit-Learn to map statistical variances across feature matrices securely.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering

Expected Graduation: 2027

G. H. Rasoni University, Amravati | Currently Pursuing 6th Semester

Higher Secondary Certificate (HSC)

2021

Samarth Jr. College, Ramtek | Percentage: 79.17%

Secondary School Certificate (SSC)

2019

Providence School, Mansar | Percentage: 65.60%

CORE STRENGTHS

- Strong architectural understanding of machine learning pipelines, feature transformation, and neural networks.
- Proficient at writing clean, maintainable, modular backend code utilizing Python scripting.
- Agile problem solver with strong engineering adaptability toward emerging AI/ML stacks and frameworks.
